

Project Manager – Systems & Communications

Position Summary

The Project Manager – Systems & Communications is responsible for planning, coordinating, and managing the delivery of systems and communications design activities supporting Sound Transit capital projects. The position serves as the primary interface between design teams, technical disciplines, project management, and stakeholders to ensure project objectives, schedules, budgets, and quality requirements are achieved.

Key Responsibilities

- Manage Systems & Communications design activities throughout project development.
- Coordinate multidisciplinary design teams, including systems, communications, civil, architectural, electrical, and construction stakeholders.
- Develop and maintain project schedules, budgets, work plans, and resource plans.
- Lead design coordination meetings and technical reviews.
- Monitor project scope, risks, assumptions, and change management activities.
- Coordinate design deliverables through all project phases.
- Support procurement and consultant management activities.
- Ensure compliance with Sound Transit design standards, project requirements, and quality management procedures.
- Prepare executive reports, status updates, presentations, and decision documents.
- Coordinate with external agencies, utilities, municipalities, and project partners.
- Support value engineering, constructability reviews, and design quality assurance activities.

Preferred Qualifications

- Bachelor's degree in Engineering, Computer Science, Information Technology, or a related technical discipline.
- 10+ years of project or program management experience.
- Experience managing Systems & Communications infrastructure projects.
- Experience coordinating multidisciplinary engineering teams.
- Experience with schedule management, cost control, and risk management.
- PMP certification preferred.
- Transit or public infrastructure experience preferred.

Desired Technical Knowledge

- Fiber optic systems
- Communications networks
- CCTV
- Access Control
- SCADA
- Radio systems
- Passenger Information Systems
- Systems integration
- Design management
- Engineering coordination

Employment Type: Contract (Initial 1-Year Term, with Option to Renew Based on Project Requirements and Performance)

Work Arrangement: Hybrid (On-site and Remote)
